## DETAILED ACTION

### *Reasons For Allowance*

1. Claims 1-10 are allowed over the prior art record.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, Gehr (U.S Pat. 5,029,238) discloses Noise Suppression Circuit having a radio receiver includes a comparator which is electrically connected to a variable potential to set a threshold voltage and connected to the IF circuit of the radio for comparison. The output of the comparator is applied to voltage controlled resistance circuits so that as the strength of the signal drops below the threshold value, the resistances are reduced.

Holcombe et al. (U.S PAT. 6,360,090) teaches bandwidth filtering an incoming signal that includes a data signal and a noise signal. The bandwidth filtered signal is then averaged to obtain an average alternating current (AC) value signal of the bandwidth filtered signal. The average AC value signal is integrated to obtain a detect level adjustment signal. The detect level adjustment signal is summed with a minimum detect threshold value to obtain a detection level signal. The incoming signal is then compared to the detection level signal in order to produce a received data signal.

However, the prior art made of record, alone or in combination, fails to clearly teach or fairly suggest circuit comprising a noise suppressing circuitry having an input for a first voltage (VDD) and an output for providing a supply voltage (VDD<sub>filtered</sub>), a

MOSFET-based switch with a MOSFET (MP) being situated in a well, where a supply voltage (VDDfiltered) can be applied to well, whereby the first voltage (VDD) is a global voltage used elsewhere in the same circuit, the supply voltage (VDDfiltered) is less-noisy than the first voltage (VDD), and the noise suppressing circuitry has a noise suppression characteristic where frequencies within a bandwidth range around the upper edge of the circuit's frequency band are damped, in combination with other limitations, as specified in the independent claim 1, and further limitations of their respective dependent claims 2-10.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
